PINEWOOD NEMATODE

Scientific name:  
*Bursaphelenchus xylophilus*

Who am I?

Hello, my name is pinewood nematode and I am a very, very small creature, so small that you can't see me with the naked eye, you can only see me with a magnifying glass! I like to live inside pine trees and feed on them!

How do I get around?

I have a kind of private plane that's an insect, like a beetle, that also feeds on pine trees and lays its eggs in the trunks of trees that are already diseased!

What happens to the pine tree??

The pine tree become sick when I live inside it. Its green needles may turn brown, it can get very dry, and it may lose many of its needles. But don't worry, I do not hurt people
